

STORCENTRIC DATA MIGRATION SERVICES

Moving unstructured data can be difficult and time consuming. Let Nexsan Professional Services help with the planning and implementation of your data migration projects. The professional services team will begin by consulting with you to understand the scope of your projects. We will help you identify the data to migrate and run analysis on it to help formulate a comprehensive project plan. Selecting from a variety of migration tools, we will deploy, configure, and monitor the migration. Frequent updates will be provided for complete project transparency.

Contact your reseller or sales@storcentric.com for a quote or more information.

PLANNING

- Identify the data sources and targets
- Analyze the source data sets to have a complete picture of the data to migrate
- Choose a server to host the data migration tools – this may be the source server, target server, or another server entirely
- Estimate the amount of time to complete the migration
- Create a SOW to describe the work to be done
- Create a project plan to track dates and milestones

IMPLEMENTATION

- Install chosen migration tools
- Configure migration jobs for each data source
- Start data migration

MONITORING AND REPORTING

- Monitor the migration jobs using remote web conference, permanent remote connection, and/or email alerts
- Update the project plan daily
- Share updates on an agreed upon basis
- Provide project summary upon completion
